DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 41 – 47 and 49 – 52 are rejected under 35 U.S.C. 102(e) as being anticipated by Takamitsu et al. (CA 2,096,672)

With reference to claim 41, Takamitsu et al. (hereinafter "Takamitsu") discloses a personal care absorbent article comprising a front portion including opposing first and second lateral side portions defining respective first and second lateral side edges (figure 1), and a central section defining a fastening area between the first and second lateral side portion (16), first and second fault lines (9b) being disposed between the fastening area and the respective first and second lateral side portions (figure 1), a rear portion including an outer rear edge (figure 2), the first and second fault lines being configured for activation to selectively release the front portion from the rear portion for use of the personal care absorbent article as a diaper-like article (page 3A); a crotch portion extending between the front portion and the rear portion (figure 6); first and second fasteners releasably secured to the fastening area (page 8, line 24 to page 9,

line 7) and non-releasably secured to the front portion without penetrating the front portion, the first and second fasteners each defining a base portion and a fastening material portion, each base portion being spaced apart from the first and second lateral side edges of the front portion and spaced axially apart from a waist opening and from respective leg openings (figure 4), the fastening material portions of the first and second fasteners being adjustable in the fastening area without activation of the first and second fault lines as set forth on page 9, line 17 to page 10, line 2.

As to claim 42, Takamitsu discloses a personal care article wherein the fault lines are cut lines having no front portion material extending across the fault lines as set forth in figure 5.

With reference to claims 43 and 50 – 52, Takamitsu discloses the fault lines as lines of perforations, which may be considered as an array of apertures, material crushed in a line pattern or material that is breakably attached, as set forth on page 5, line 20.

With respect to claim 44, Takamitsu discloses a personal care article wherein each fastening material portion includes hook-type fasteners engageable with loop material at the fastening area as set forth on pages 8, line 24 to page 9, line 7.

Regarding claim 45, Takamitsu discloses the first and second fasteners providing at least partial support of integrity of the front portion across the fault lines as set forth in figure 1.

With reference to claim 46, Takamitsu discloses a fastening area that comprises a separate and distinct patch of fastening material affixed to an underlying web as set forth on page 9, lines 13 – 16.

As to claim 47, Takamitsu discloses a fastening area that is integral with a front surface of the central section of the front portion as set forth in figure 4.

As to claim 49, Takamitsu discloses a personal care article wherein a floating portion of each fastener is disposed, from the respective fault line, inwardly toward a central portion of the front portion, and being unattached to the front portion inwardly of the respective fault line as set forth in figure 5.

Response to Arguments

Applicant's arguments filed September 2, 2005 have been fully considered but they are not persuasive.

In response to applicant's argument that Takamitsu does not flaps that are not spaced apart from side the side portions, the examiner disagrees. The first paragraph of page 5 of Takamitsu states that the flaps are intermittently bonded together at line 8 so as to leave respective outer edges of the components unbonded as shown in figure 4.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**.

See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michele Kidwell whose telephone number is 571-272-4935. The examiner can normally be reached on Monday thru Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Tatyana Zalukaeva can be reached on 571-272-1115. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
